Cloud Computing and Big Data

Big Data
Pulling it all together

Oxford University
## Software Engineering Programme
Nov 2015

Contents

- Understanding the bigger picture
- What are the different components
- Message queueing and collection systems
- Map-Reduce and DAG systems
- Realtime Systems
- Fast databases for speed
- Visualisation and Dashboards

The big picture

Visualisation System

NoSQL or
SQL database → **Visualisation Store**

DAG pipeline
Map-Reduce
Micro-batch etc → Realtime | Map | Reduce | Pipeline

Master data → **Storage**

Data collection
models, queueing

The World

The big picture

- You have *immutable* master data
- You create a set of processes to:
  - Collect that data
  - Store master data
  - Process data
  - Visualise and present
- Some of those processes act on batch and others on real-time data

How to choose the components?

- Two main approaches:
    - Best of breed
        - Choose the best available component in each space
    - Stack
        - Choose a curated stack that a team or organization is providing/selling/supporting

Approach

- Minimise the pain
  - Choose what you need when you need it
  - Don't over engineer

How do I ingest data?

- File transfer

- Live stream
  - Sockets
  - Syslog
  - Messaging system

- From existing databases

How do I store data?

- HDFS
- Cassandra File System
- NoSQL database only
    - Mongo / HBase / Cassandra
- zFS / GlusterFS / NFS etc

How do I process data?

- Simple Map Reduce
- Hive / Pig
- DAG
- Pipeline
- etc

How do I visualise data

- From a SQL database?
- From a NoSQL database?
- Generate charts in Python Spark?
- Etc?

Collection / Queuing systems

- Two ways of making the choice
  - The protocol
  - The middleware
- Protocols
  - ZeroMQ, MQTT, AMQP, STOMP, Kafka Protocol, Rendevouz, etc
- Middleware
 - Kafka, Apollo, Mosquitto, QPid, MQ, Tibco, WSO2, etc

Apache Kafka

Source: http://www.slideshare.net/charmalloc/

ZeroMQ

CassandraFS
(not open source)

Processing approaches

- Covered in detail already
- Hadoop
- Spark
- Tez
- etc

Cluster management systems

- YARN
  - Part of Hadoop but significantly rebuilt since Hadoop 1

- Mesos
  - Popular Apache project
  - Built to be a resource manager for a complete datacenter
    - Supports many workloads (e.g. Docker as well as Spark)
Apache Mesos

Realtime

- ## Apache Storm
  - Highly flexible model
  - Supports pure streaming and micro-batch
  - Lots of plugins

- ## Apache Spark
  - Micro-batch only
  - Integrates cleanly into Spark (fewer components)
  - Some plugins and more being developed

Visualisation

Twitter / datetime

Hashtag
- #PrayForParis
- #ParisAttacks
- #Fusillade
- #RechercheParis
- #PorteOuverte
- #PrayForSyria
- #NousSommesUnis

The first hashtag is in french #Fusillade.
It reaches 391.63K tweets at 23:00.

Visualisation approaches

- ## Full products
  - Tableau, Qlik, SAS, GoodData
- ## Web-based systems
  - Tableau Public, Datawrapper, Raw, Plotly
- ## Developer oriented
 - D3.js, dygraphs, Python charting, Leaflet, Fusion Charts, Google Charts, etc

Fortune top 10 big data companies

fortune.com/2014/06/13/these-big-data-companies-are-ones-to-watch/

- MapR – Apache Hadoop
- MemSQL
- Databricks – Apache Spark
- Platfora – Apache Hadoop
- Splunk
- Teradata – Apache Hadoop
- Palantir – Hadoop, Cassandra, Lucene
- Premise
- Datameer – Apache Hadoop
- Cloudera – Apache Hadoop
- Hortonworks – Apache Hadoop
- MongoDB – MongoDB
- Trifacta – Apache Hadoop

Hortonworks
Enhanced SQL Semantics in Apache Hive

Hive adds time intervals and UNION semantics, 2.5x performance improvements and improved query scheduling, along with a more streamlined user interface for Hive within Ambari.

Solr on YARN

The Solr search engine is being built to run on YARN and is now in technical preview. This critical advancement allows customers to reduce their total cost of ownership by deploying Solr within the same cluster as other workloads – eliminating the need for a "side cluster" dedicated to indexing data and delivering search results.

New capabilities for feature-rich Spark applications

Apache Spark on YARN is enhanced with the new DataFrame API, machine learning algorithms such as clustering, frequent pattern-mining algorithms and a technology preview of SparkSQL.

Databricks

WSO2 DAS

Lambda

# The real answer

You are on the bleeding edge
−Expect to have some pain

Questions?
